

SNAKEGUARD LITE - EMERGENCY ACTION PLAN

Generated: 18 May 2026 14:17 | For immediate emergency use only

Identified Species

Red Sand Boa (Eryx johnii)

Danger Level

NONE

AI Assessment

The Red Sand Boa is a non-venomous constrictor. It is easily identified by its thick body and very blunt tail that resembles its head. It is harmless to humans and generally docile.

First Aid Instructions

1. Remain calm and move a safe distance away from the snake to prevent any further bites or stress to the animal.
2. Wash the bite wound thoroughly with mild soap and clean, running water for several minutes to reduce the risk of bacterial infection.
3. Apply a sterile dressing or a clean, dry bandage to the wound to protect it from dirt and further irritation.
4. Monitor the site for signs of secondary infection, such as increasing redness, swelling, warmth, or pus, over the following days.
5. Consult a healthcare provider to verify your tetanus vaccination status and ensure the wound is properly documented and treated.
