

SNAKEGUARD LITE - EMERGENCY ACTION PLAN

Generated: 18 May 2026 14:18 | For immediate emergency use only

Identified Species

Banded Krait (*Bungarus fasciatus*)

Danger Level

CRITICAL

AI Assessment

The Banded Krait is a highly venomous elapid with potent neurotoxic venom. A bite can lead to respiratory failure and is potentially fatal without immediate medical treatment.

First Aid Instructions

1. Reassure the victim and keep them as still as possible to slow the spread of venom through the lymphatic system.
2. Remove any rings, watches, or tight clothing from the bitten limb immediately before swelling begins.
3. Apply a broad pressure immobilization bandage over the bite site and wrap the entire limb firmly, similar to the tension used for a sprained ankle.
4. Splint the limb to ensure it remains completely immobile and keep the bite site at or below the level of the heart.
5. Transport the victim to the nearest medical facility immediately for professional treatment and administration of polyvalent antivenom.
